

204 Icknield Way – Application for semi-permeable pavers on front driveway

There is currently space for one vehicle in the front driveway.

There is a large grass space adjacent to this driveway which can hold a second vehicle, but if you park on the grass there is a risk the vehicle becomes stuck or causes damage.

This application seeks to add a semipermeable solution to the 4m x 5m space adjacent to the existing driveway as shown in the images below. It will be semipermeable to allow some grass visible through, but be able to support a vehicle. The existing driveway will remain exactly as it is. The pattern/product will be similar to the example images from online below.

Existing

Proposed 4m x 5m semipermeable paved space adjacent to existing driveway.

The product/pattern will be similar to these examples from online.
